ARG23325 anti-CD130 / gp130 antibody [B-S12] (low endotoxin)

Package: 100 μl Store at: -20°C

Summary

Product Description Azide free and low endotoxin Mouse Monoclonal antibody [B-S12] recognizes CD130 / gp130

Tested Reactivity Hu

Tested Application FACS, FuncSt, IP, WB

Specificity This antibody recognizes the Gp130, common subunit for IL-6, IL-11, OSM, LIF, CNTF, CT-1 receptors, a

130-140 kDa protein.

Host Mouse

Clonality Monoclonal

Clone B-S12

Isotype IgG1

Target Name CD130 / gp130

Species Human

Immunogen Natural soluble gp130

Conjugation Un-conjugated

Alternate Names CDw130; CD130; CDW130; Interleukin-6 signal transducer; CD antigen CD130; IL-6RB; Membrane

glycoprotein 130; GP130; Oncostatin-M receptor subunit alpha; IL-6R subunit beta; Interleukin-6

receptor subunit beta; gp130; IL-6 receptor subunit beta; IL-6R-beta

Application Instructions

Application table	Application	Dilution
	FACS	Assay-dependent
	FuncSt	Assay-dependent
	IP	Assay-dependent
	WB	Assay-dependent
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form	Liquid	
Purification Note	Sterile-filtered through 0.22 μm and treated to remove endotoxins.	
Buffer	PBS	
Storage instruction	For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed	

For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol

IL6ST

Gene Full Name

interleukin 6 signal transducer

Background

The protein encoded by this gene is a signal transducer shared by many cytokines, including interleukin 6 (IL6), ciliary neurotrophic factor (CNTF), leukemia inhibitory factor (LIF), and oncostatin M (OSM). This protein functions as a part of the cytokine receptor complex. The activation of this protein is dependent upon the binding of cytokines to their receptors. vIL6, a protein related to IL6 and encoded by the Kaposi sarcoma-associated herpesvirus, can bypass the interleukin 6 receptor (IL6R) and directly activate this protein. Knockout studies in mice suggest that this gene plays a critical role in regulating myocyte apoptosis. Alternatively spliced transcript variants have been described. A related pseudogene has been identified on chromosome 17. [provided by RefSeq, May 2014]

Function

Signal-transducing molecule. The receptor systems for IL6, LIF, OSM, CNTF, IL11, CTF1 and BSF3 can utilize gp130 for initiating signal transmission. Binds to IL6/IL6R (alpha chain) complex, resulting in the formation of high-affinity IL6 binding sites, and transduces the signal. Does not bind IL6. May have a role in embryonic development (By similarity). The type I OSM receptor is capable of transducing OSM-specific signaling events. [UniProt]

Calculated Mw

104 kDa

PTM

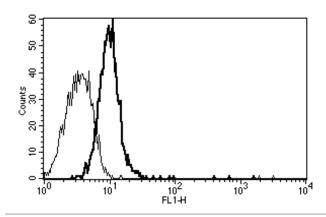

Phosphorylation of Ser-782 down-regulates cell surface expression.

Heavily N-glycosylated (PubMed:11098061, PubMed:16335952, PubMed:19159218,

 $PubMed: 19139490, PubMed: 11251120). \ Glycosylation\ is\ required\ for\ protein\ stability\ and\ localization$

in plasma membrane but not for ligand binding (PubMed:19915009). [UniProt]
