

# ARG57664 anti-CD63 antibody

Package: 100 μg Store at: -20°C

# Summary

Product Description	Goat Polyclonal antibody recognizes CD63
Tested Reactivity	Hu, Ms, Rat, Dog, Mk
Tested Application	ICC/IF, WB
Specificity	The antibody reacts with CD63, a 40-60 kDa glycoprotein.
Host	Goat
Clonality	Polyclonal
Isotype	IgG
Target Name	CD63
Species	Human
Immunogen	Synthetic peptide around aa. 120-175 of Human CD63.
Conjugation	Un-conjugated
Alternate Names	Tspan-30; CD63 antigen; Tetraspanin-30; CD antigen CD63; Lysosomal-associated membrane protein 3; OMA81H; Ocular melanoma-associated antigen; Granulophysin; TSPAN30; Melanoma-associated antigen ME491; MLA1; LAMP-3; ME491

# **Application Instructions**

Application table	Application	Dilution
	ICC/IF	1:25 - 1:250
	WB	1:500 - 1:5000
Application Note	* The dilutions indicate recomm should be determined by the sci	nended starting dilutions and the optimal dilutions or concentrations ientist.
Positive Control	WB: Human (HeLa, HUH, Jurkat) (COS-7) whole cell lysates.	), Mouse (AtT-20, Hepa, 3T3, RAW264.7), Canine (MDCK) and Monkey
Observed Size	40 - 60 kDa (glycoprotein)	

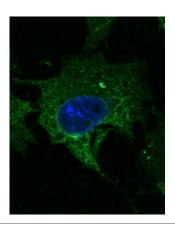

#### Properties

Form	Liquid
Purification	Affinity purification with immunogen.
Buffer	PBS, 0.05% Sodium azide and 20% Glycerol.
Preservative	0.05% Sodium azide
Stabilizer	20% Glycerol
Concentration	3 mg/ml

## Bioinformation

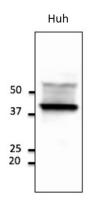

Gene Symbol	CD63
Gene Full Name	CD63 molecule
Background	The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. The encoded protein is a cell surface glycoprotein that is known to complex with integrins. It may function as a blood platelet activation marker. Deficiency of this protein is associated with Hermansky-Pudlak syndrome. Also this gene has been associated with tumor progression. Alternative splicing results in multiple transcript variants encoding different protein isoforms. [provided by RefSeq, Apr 2012]
Function	Functions as cell surface receptor for TIMP1 and plays a role in the activation of cellular signaling cascades. Plays a role in the activation of ITGB1 and integrin signaling, leading to the activation of AKT, FAK/PTK2 and MAP kinases. Promotes cell survival, reorganization of the actin cytoskeleton, cell adhesion, spreading and migration, via its role in the activation of AKT and FAK/PTK2. Plays a role in VEGFA signaling via its role in regulating the internalization of KDR/VEGFR2. Plays a role in intracellular vesicular transport processes, and is required for normal trafficking of the PMEL luminal domain that is essential for the development and maturation of melanocytes. Plays a role in the adhesion of leukocytes onto endothelial cells via its role in the regulation, but not in mast cell degranulation in response to Ms4a2/FceRI stimulation, but not in mast cell degranulation in response to other stimuli. [UniProt]
Calculated Mw	26 kDa
РТМ	Palmitoylated at a low, basal level in unstimulated platelets. The level of palmitoylation increases when platelets are activated by thrombin (in vitro). [UniProt]

#### Images

#### ARG57664 anti-CD63 antibody ICC/IF image

Immunofluorescence: 4% PFA fixed Hepa1-6 cells stained with ARG57664 anti-CD63 antibody at 1:50 dilution.

#### ARG57664 anti-CD63 antibody WB image

Western blot: 50  $\mu g$  of Huh cell lysate stained with ARG57664 anti-CD63 antibody at 1:2500 dilution.
