ARG70448
Pig CXCL11 / I-TAC recombinant protein (His-tagged, N-ter)

Package: 100 μg , 20 μg

Store at: -20°C

Summary

Product Description E. coli expressed, His-tagged (N-ter) Pig CXCL11 / I-TAC recombinant protein

Tested Application SDS-PAGE

Target Name CXCL11 / I-TAC

Species Pig

A.A. Sequence Phe22 - Val100

Expression System E. coli

Alternate Names CXCL11; C-X-C Motif Chemokine Ligand 11; I-TAC; H174; IP-9; SCYB11; SCYB9B; B-R1; Small Inducible

Cytokine Subfamily B (Cys-X-Cys), Member 11; Interferon-Inducible T-Cell Alpha Chemoattractant

Properties

Form Powder

Purification Note Endotoxin level is less than 0.1 EU/μg of the protein, as determined by the LAL test.

Purity > 98% (by SDS-PAGE)

Buffer PBS (pH 7.4)

Reconstitution It is recommended to reconstitute the lyophilized protein in sterile water to a concentration not less

than 200 µg/mL and incubate the stock solution for at least 20 min at room temperature to make sure

the protein is dissolved completely.

Storage instruction For long term, lyophilized protein should be stored at -20°C or -80°C. After reconstitution, aliquot and

store at -20°C or -80°C for up to one month. Storage in frost free freezers is not recommended. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol CXCL11

Gene Full Name C-X-C Motif Chemokine Ligand 11

Background Chemokines are a group of small (approximately 8 to 14 kD), mostly basic, structurally related

molecules that regulate cell trafficking of various types of leukocytes through interactions with a subset of 7-transmembrane, G protein-coupled receptors. Chemokines also play fundamental roles in the development, homeostasis, and function of the immune system, and they have effects on cells of the central nervous system as well as on endothelial cells involved in angiogenesis or angiostasis.

Chemokines are divided into 2 major subfamilies, CXC and CC. This antimicrobial gene is a CXC member of the chemokine superfamily. Its encoded protein induces a chemotactic response in activated T-cells and is the dominant ligand for CXC receptor-3. The gene encoding this protein contains 4 exons and at least three polyadenylation signals which might reflect cell-specific regulation of expression. IFN-gamma is a potent inducer of transcription of this gene. Two transcript variants encoding different

isoforms have been found for this gene.

Function Chemotactic for interleukin-activated T-cells but not unstimulated T-cells, neutrophils or monocytes.

Induces calcium release in activated T-cells. Binds to CXCR3. May play an important role in CNS diseases

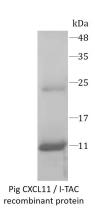

www.arigobio.com arigo.nuts about antibodies 1/2

which involve T-cell recruitment. May play a role in skin immune responses.

PTM Citrullination, Disulfide bond

Cellular Localization Secreted
