Bioinformation

Gene Symbol SMOC1

Gene Full Name SPARC related modular calcium binding 1

Background This gene encodes a multi-domain secreted protein that may have a critical role in ocular and limb development. Mutations in this gene are associated with microphthalmia and limb anomalies. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Mar 2011]

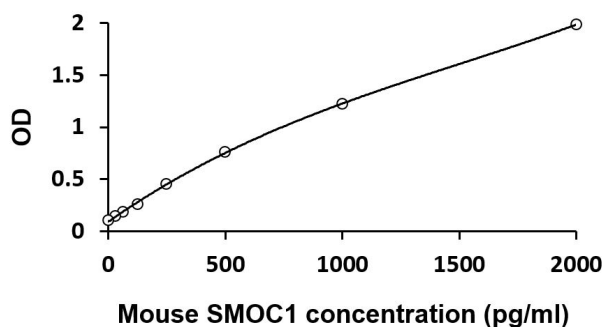

Function Plays essential roles in both eye and limb development. Probable regulator of osteoblast differentiation. [UniProt]
