## ARG82798 Human IGFBP1 ELISA Kit

Package: 96 wells Store at: 4°C

## **Summary**

Product Description ARG82798 Human IGFBP1 ELISA Kit is an Enzyme Immunoassay kit for the quantification of IGFBP1 in

Human serum.

Tested Reactivity Hu

Tested Application ELISA

Specificity Cross-Reactivity: Not react with IGFBP2, 3, 4 and 5.

Target Name IGFBP1

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity  $0.5 \mu g/L$ 

Sample Type Serum

Standard Range  $1 - 250 \mu g/L$ 

Sample Volume 25 µl

Precision Intra-Assay CV: 2.8%

Inter-Assay CV: 6.2%

Alternate Names IBP-1; IBP1; PP12; IGF-BP25; Insulin-like growth factor-binding protein 1; hIGFBP-1; IGFBP-1; Placental

protein 12; AFBP; IGF-binding protein 1

## **Application Instructions**

Assay Time 1 hour 15 min

## **Properties**

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Gene Symbol IGFBP1

Gene Full Name insulin-like growth factor binding protein 1

Background This gene is a member of the insulin-like growth factor binding protein (IGFBP) family and encodes a

protein with an IGFBP N-terminal domain and a thyroglobulin type-I domain. The encoded protein, mainly expressed in the liver, circulates in the plasma and binds both insulin-like growth factors (IGFs) I and II, prolonging their half-lives and altering their interaction with cell surface receptors. This protein is

www.arigobio.com arigo.nuts about antibodies 1/2

important in cell migration and metabolism. Low levels of this protein may be associated with impaired glucose tolerance, vascular disease and hypertension in human patients. [provided by RefSeq, Aug

2017]

Function IGF-binding proteins prolong the half-life of the IGFs and have been shown to either inhibit or stimulate

the growth promoting effects of the IGFs on cell culture. They alter the interaction of IGFs with their

cell surface receptors. Promotes cell migration. [UniProt]

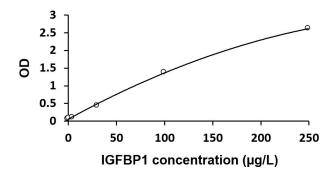

PTM Phosphorylated; probably by casein kinase II. Phosphorylation alters the affinity of the protein for IGFs.

In amniotic fluid, the unmodified protein is the most abundant form, while mono-, bi-, tri- and tetraphosphorylated forms are present in decreasing amounts. The phosphorylation state may

influence the propensity to proteolysis. [UniProt]

Cellular Localization Secreted. [UniProt]
